SKILLS

- Python, Rust
- Docker
- Amazon EC2, S3, Lambda, RDS, EKS, IAM, VPC, CloudWatch
- Kubernetes, Helm
- CI/CD Pipeline Design
- Infrastructure as Code (IaC), Terraform
- Ansible, Bash/Shell Scripting
- Linux System Administration
- Prometheus
- Grafana

EDUCATION

SRM IST, KTR, TN

Genetic Engineering

GPA: 3.1 / 4.0 2022 - 2026

PM. Shri Kendrivya Vidyalaya
10 + 2

Percentage : 88% 2022

PROFILE

I've been building and scaling Xenkrypt as a startup, where I designed and managed the entire DevOps pipeline from the ground up—setting up secure VPN-based access, self-hosting tools like GitLab, implementing CI/CD with Jenkins, and deploying containerized services using Docker on AWS infrastructure. This hands-on experience has given me strong exposure to Linux systems, automation, cloud provisioning, and security-focused architecture, and I'm now looking to apply these skills in a professional DevOps role where I can contribute to building reliable, scalable, and efficient systems.

WORK EXPERIENCE

Xenkrypt Pvt. Ltd.

2023 - 2026

Co-Founder, CTO

- Led and managed a cross-functional team of 20+ members, coordinating development, security, and deployment efforts to deliver a production-ready platform.
- Architected and built EncryptiV, a zero-knowledge, client-side encrypted microservices system with a focus on scalability, security, and performance.
- Implemented post-quantum cryptography (PQC) concepts into the product design to future-proof data security against emerging threats.
- Owned end-to-end product execution—from system design and backend development (Rust) to DevOps pipelines and cloud deployment—ensuring reliability at scale.

Sentrix, Talencia Global Pvt Ltd.

2026 - Present

Product Engineer

- Built Sentrix, an open-source enterprise cybersecurity grid simulating a full-scale SOC across 10 integrated security domains.
- Implemented real-time threat detection and response using ELK, Wazuh, IAM, and SOAR pipelines.
- Converted a high-level idea into a fully functional product by defining architecture and integrating multi-domain security systems.
- Led end-to-end development and deployment, ensuring a cohesive, production-ready cybersecurity platform.

PROJECTS

EncryptiV - Encrypted Micro-services Platform

- Designed and managed dev, staging, and production environments, ensuring isolation, scalability, and smooth release cycles.
- Deployed containerized workloads on AWS (EKS, EC2, S3, RDS, VPC, IAM, CloudWatch, ALB/ELB) with secure networking, storage, and monitoring.
- Built CI/CD pipelines and automated infrastructure using ECR, Auto Scaling, Route 53, and CloudFront for reliable, high-availability deployments.
